

GULF GRAPHITE GREASE

Gulf Graphite Greases are good quality economical Calcium based greases fortified with best known natural solid lubricant, graphite.

They are recommended for moderately low temperature applications where water resistance is required such as lubrication of slow speed, heavy-duty plain bearings throughout industry. The presence of graphite gives added protection when routine service intervals are extended.

Gulf Graphite Grease is available in NLGI grades 2 and 3, and recommended for use at temperatures from -25°C to 60°C .

Typical Properties (selected grades only)

NLGI Grade	2	3
Soap Thickener	Calcium	Calcium
Texture	Smooth/Buttery	
Dropping Point, $^{\circ}\text{C}$	90	90
Penetration, D 217 worked 60 x, mm/10	280	235
